### Research Papers

Validation and intercomparisons of wave measurements and models during the EuroROSE experiments L.R. Wyatt, J.J. Green, K.-W. Gurgel, J.C. Nieto Borge, K. Reichert, K. Hessner, H. Günther, W. Rosenthal, O. Saetra and M. Reistad	1
Probability assessment for deep-draft navigation channel design M.J. Briggs, L.E. Borgman and E. Bratteland	29
Limiting slopes and depths at ebb-tidal shoals F.S. Buonaiuto and N.C. Kraus	51
On the discrepancy in long wave scaling C. Narayanan	67
Wave forces on submerged, alternately submerged, and emerged semicircular breakwaters D. Yuan and J. Tao	75
Longshore sediment transport rate—measurement and estimation, central west coast of India V. Sanil Kumar, N.M. Anand, P. Chandramohan and G.N. Naik	95
Comparison of sediment transport formulae for the coastal environment B. Camenen and P. Larroudé	111

### Discussions

Discussion of "Simple and explicit solution to the wave dispersion equation" [Coastal Engineering 45 (2002) 71–74] Z.-J. You	133
Reply to "Discussion of "Simple and explicit solution to the wave dispersion equation" [Coastal Engineering 45 (2002) 71–74]" J. Guo	137

### Research Papers

Calibration and verification of a parametric wave model on barred beaches B.G. Ruessink, D.J.R. Walstra and H.N. Southgate	139
Data-driven modeling of multiple longshore bars and their interactions G. Różyński	151
A simple model of unsteady sheet-flow sediment transport J. Malarkey, A.G. Davies and Z. Li	171
The drag coefficient, bottom roughness, and wave-breaking in the nearshore F. Feddersen, E.L. Gallagher, R.T. Guza and S. Elgar	189
Mathematical modelling of sand wave migration and the interaction with pipelines R. Morelissen, S.J.M.H. Hulscher, M.A.F. Knaapen, A.A. Németh and R. Bijker	197
Evaluation of a method to reduce uncertainty in wind hindcasts performed with regional atmosphere models R. Weisse and F. Feser	211
Scour below pipelines and around vertical piles in random waves D. Myrhaug and H. Rue	227
Effects of cross-shore boundary condition errors in nearshore circulation modeling Q. Chen and I.A. Svendsen	243

An unsteady wave driver for narrowbanded waves: modeling nearshore circulation driven by wave groups A.B. Kennedy and J.T. Kirby . . . . .	257
Extended mild-slope equation for random waves C. Lee, G. Kim and K.-D. Suh . . . . .	277
<i>Contents of volume 48</i> . . . . .	289
